

Dear Payers,

Member Register Bulk Upload and Download Report Web Service Methods

Two new web services are introduced to facilitate the process of uploading members on member register for the healthcare payers.

UploadBulkMemberRegistration - Web service method utilized by the payers to upload member register records in bulk to the DHPO.

- This will enable Payers to upload member register records in bulk
 - Maximum number of records per file is **500**

DownloadReport - Web service method utilized by the payers to download the error report received from the GDRFA.

- This will provide an error report indicating if there is a match or a mismatch between the data uploaded and GDRFA database.
- The error report can be obtained in two ways:
 - Using the web service "DownloadReport".
 - Downloading the error report from the eClaimLink Member Register interface.
- The error report will not be real time, the report will take some time to be generated as all the records will be validated against the GDRFA database.

Documentation:

The document containing all the technical details for the new web services is now published on eClaimLink:

- DHD > Documentation > Documentation section > [[Member Register Bulk Upload Document](#)]

Best Regards,

Information Desk Officer
